		<p>to, and understand subtraction as taking apart and taking from.</p> <ul style="list-style-type: none"> 1. Represent addition and subtraction with objects, fingers, mental images, drawings, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations. 	<ul style="list-style-type: none"> Introduction to addition and subtraction symbols 	
<p>November – December</p>	<p>Counting and Cardinality</p> <p>Operations and Algebraic Thinking</p>	<p>K.CC Compare numbers.</p> <ul style="list-style-type: none"> 6. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies. 7. Compare two numbers between 1 and 10 presented as written numerals. <p>K.OA Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.</p> <ul style="list-style-type: none"> 4. For any number from 1 to 9, find the number that makes 10 when added to the given number, e.g., by using objects or drawings, and record the answer with a drawing or equation. 5. Fluently add and subtract within 5. 	<ul style="list-style-type: none"> Comparing numbers Strategies for counting up Addition and subtraction fluency (within 5) 	<p>MP.7. Look for and make use of structure.</p>
<p>January</p>	<p>Measurement and Data</p>	<p>K.MD Describe and compare measurable attributes.</p> <ul style="list-style-type: none"> 1. Describe measurable attributes of objects, such as length or weight. Describe several measurable attributes of a single object. 2. Directly compare two objects with a measurable attribute in common, to see which object has “more of”/“less of” the attribute, and describe the difference. For example, directly compare the heights of two children and describe one child as taller/shorter. <p>Classify objects and count the number of objects in each category.</p>	<ul style="list-style-type: none"> Introduction to mass/weight Comparing two objects with similar attributes 	<p>MP.1. Make sense of problems and persevere in solving them.</p>

		<ul style="list-style-type: none"> 4. Analyze and compare two- and three-dimensional shapes, in different sizes and orientations, using informal language to describe their similarities, differences, parts (e.g., number of sides and vertices/"corners") and other attributes (e.g., having sides of equal length). 5. Model shapes in the world by building shapes from components (e.g., sticks and clay balls) and drawing shapes. 6. Compose simple shapes to form larger shapes. For example, "Can you join these two triangles with full sides touching to make a rectangle?" 	<ul style="list-style-type: none"> 2-D and 3-D shapes and their attributes Draw and Describe 2-D/3-D shapes 	
May – June	Number and Operations in Base Ten	<p>K.NBT Work with numbers 11–19 to gain foundations for place value.</p> <ul style="list-style-type: none"> 1. Compose and decompose numbers from 11 to 19 into ten ones and some further ones, e.g., by using objects or drawings, and record each composition or decomposition by a drawing or equation (e.g., $18 = 10 + 8$); understand that these numbers are composed of ten ones and one, two, three, four, five, six, seven, eight, or nine ones. <p>K.OA Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from.</p> <ul style="list-style-type: none"> 2. Solve addition and subtraction word problems, and add and subtract within 10, e.g., by using objects or drawings to represent the problem. 	<ul style="list-style-type: none"> Decomposing two-digit numbers into tens and ones Word Problems 	MP.4. Model with mathematics

		number of length units, by laying multiple copies of a shorter object (the length unit) end to end; understand that the length measurement of an object is the number of same-size length units that span it with no gaps or overlaps. <i>Limit to contexts where the object being measured is spanned by a whole number of length units with no gaps or overlaps.</i>	length of an object as a whole number of length units.	
November	Operations and Algebraic Thinking	<p>1.OA Understand and apply properties of operations and the relationship between addition and subtraction.</p> <ul style="list-style-type: none"> 3. Apply properties of operations as strategies to add and subtract. <i>Examples: If $8 + 3 = 11$ is known, then $3 + 8 = 11$ is also known. (Commutative property of addition.) To add $2 + 6 + 4$, the second two numbers can be added to make a ten, so $2 + 6 + 4 = 2 + 10 = 12$. (Associative property of addition.)</i> <p>Add and subtract within 20.</p> <ul style="list-style-type: none"> 5. Relate counting to addition and subtraction (e.g., by counting on 2 to add 2). 6. Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use mental strategies such as counting on; making ten (e.g., $8 + 6 = 8 + 2 + 4 = 10 + 4 =$ Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use mental strategies such as counting on; making ten (e.g., $8 + 6 = 8 + 2 + 4 = 10 + 4 =$ <p>Work with addition and subtraction equations.</p> <ul style="list-style-type: none"> 7. Understand the meaning of the equal sign, and determine if equations involving addition and subtraction are true or false. <i>For example, which of the following equations are true and which are false? $6 = 6$, $7 = 8 - 1$, $5 + 2 = 2 + 5$, $4 + 1 = 5 + 2$.</i> 	<ul style="list-style-type: none"> Determine if addition and subtraction equations are true or false. Add and subtract within 20. Demonstrate fluency for adding and subtracting within 20. Explain strategies used to add and subtract 	MP.8. Look for and express regularity in repeated reasoning.
December – February	Operations and Algebraic Thinking	<p>1.OA Represent and solve problems involving addition and Subtraction.</p>		

		<ul style="list-style-type: none"> 1. Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. 2. Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem. <p>Understand and apply properties of operations and the relationship between addition and subtraction.</p> <ul style="list-style-type: none"> 4. Understand subtraction as an <i>unknown-addend</i> problem. <i>For example, subtract $10 - 8$ by finding the number that makes 10 when added to 8.</i> <p>Work with addition and subtraction equations.</p> <ul style="list-style-type: none"> 8. Determine the unknown whole number in an addition or subtraction equation relating three whole numbers. <i>For example, determine the unknown number that makes the equation true in each of the equations $8 + ? = 11$, $5 = ? - 3$, $6 + 6 = ?$.</i> MA.9. Write and solve number sentences from problem situations that express relationships involving addition and subtraction within 20. 	<ul style="list-style-type: none"> Solve word problems using addition and subtraction with objects, drawings, and equations. Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20. Determine the unknown number in addition or subtraction equations. Determine the unknown number in addition or subtraction equations. Write and solve number sentences from problem situations of addition or subtraction. 	
March – April	Number and Operations in Base 10	<p>1.NBT</p> <p>Understand place value.</p> <ul style="list-style-type: none"> 2. Understand that the two digits of a two-digit number represent amounts of tens and ones. Understand the following as special cases: <ul style="list-style-type: none"> a. 10 can be thought of as a bundle of ten ones—called a “ten.” b. The numbers from 11 to 19 are composed of a ten and one, two, three, four, five, six, seven, eight, or nine ones. 	<ul style="list-style-type: none"> Mentally find 10 more or 10 less than a given number without having to count. Subtract multiples of 10 in the range 10-90 from multiples of 10 using concrete models or drawings. 	MP.2. Reason abstractly and quantitatively.

	Measurement and Data	<p>c. The numbers 10, 20, 30, 40, 50, 60, 70, 80, 90 refer to one, two, three, four, five, six, seven, eight, or nine tens (and 0 ones).</p> <p>Use place value understanding and properties of operations to add and subtract.</p> <ul style="list-style-type: none"> 4. Add within 100, including adding a two-digit number and a one-digit number, and adding a two-digit number and a multiple of 10, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. Understand that in adding two-digit numbers, one adds tens and tens, ones and ones; and sometimes it is necessary to compose a ten. 5. Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used. 6. Subtract multiples of 10 in the range 10–90 from multiples of 10 in the range 10–90 (positive or zero differences), using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used. <p>1.MD Work with money.</p> <ul style="list-style-type: none"> MA.5. Identify the values of all U.S. coins and know their comparative values (e.g., a dime is of greater value than a nickel). Find equivalent values (e.g., a nickel is equivalent to 5 pennies). Use appropriate notation (e.g., 69¢). Use the values of coins in the solutions of problems. 	<ul style="list-style-type: none"> Add within 100, including adding a two-digit number and a one-digit number, and adding a two-digit number and a multiple of ten, using concrete models or drawings. Find value of different coin amounts. 	
May	Geometry	1.G Reason with shapes and their attributes.		MP.7. Look for and make use of structure.

	Measurement and Data	<ul style="list-style-type: none"> 1. Distinguish between defining attributes (e.g., triangles are closed and three-sided) versus non-defining attributes (e.g., color, orientation, overall size); build and draw shapes that possess defining attributes. 2. Compose two-dimensional shapes (rectangles, squares, trapezoids, triangles, half-circles, and quarter-circles) or three-dimensional shapes (cubes, right rectangular prisms, right circular cones, and right circular cylinders) to create a composite shape, and compose new shapes from the composite shape. 3. Partition circles and rectangles into two and four equal shares, describe the shares using the words <i>halves</i>, <i>fourths</i>, and <i>quarters</i>, and use the phrases <i>half of</i>, <i>fourth of</i>, and <i>quarter of</i>. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing into more equal shares creates smaller shares. <p>1.MD Tell and write time.</p> <ul style="list-style-type: none"> 3. Tell and write time in hours and half-hours using analog and digital clocks. 	<ul style="list-style-type: none"> Describe properties and categorize shapes. Compare similarities and differences of shapes Build new shapes and decompose shapes into other shapes. Build and draw shapes to possess different attributes. Partition circles and rectangles into equal shares. Tell time to the nearest hour and half-hour. 	
June	Measurement and Data Operations and Algebraic Thinking	<p>1.MD Represent and interpret data.</p> <ul style="list-style-type: none"> 4. Organize, represent, and interpret data with up to three categories; ask and answer questions about the total number of data points, how many in each category, and how many more or less are in one category than in another. <p>1.OA Represent and solve problems involving addition and subtraction.</p> <ul style="list-style-type: none"> 1. Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all 	<ul style="list-style-type: none"> Organize data. Represent data on a bar graph. Interpret data found on a bar graph. Answer questions about the data by calculating information from the graph 	MP.6. Attend to precision.

		<p>positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.</p> <ul style="list-style-type: none"> 2. Solve word problems that call for addition of three whole numbers whose sum is less than or equal to 20, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.

October-December	<p>Number and Operations in Base Ten</p> <p>Measurement and Data</p> <p>Operations and Algebraic Thinking</p>	<p>2.NBT Use place value understanding and properties of operations to add and subtract.</p> <ul style="list-style-type: none"> 5. Fluently add and subtract within 100 using strategies based on place value, properties of operations, and/or the relationship between addition and subtraction. 6. Add up to four two-digit numbers using strategies based on place value and properties of operations. 7. Add and subtract within 1000, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method. Understand that in adding or subtracting three-digit numbers, one adds or subtracts hundreds and hundreds, tens and tens, ones and ones; and sometimes it is necessary to compose or decompose tens or hundreds. 9. Explain why addition and subtraction strategies work, using place value and the properties of operations 8. Mentally add 10 or 100 to a given number 100–900, and mentally subtract 10 or 100 from a given number 100–900. <p>2.MD Relate addition and subtraction to length.</p> <ul style="list-style-type: none"> 6. Represent whole numbers as lengths from 0 on a number line diagram with equally spaced points corresponding to the numbers 0, 1, 2, ..., and represent whole-number sums and differences within 100 on a number line diagram. <p>2.OA Add and subtract within 20.</p> <ul style="list-style-type: none"> 2. Fluently add and subtract within 20 using mental strategies. By end of Grade 2, know from memory 	<ul style="list-style-type: none"> Fluently add and subtract within 50 (using known relationships, creating equivalent sums) Strategies to fluently add and subtract with 100 Add or subtract 10 or 100 Represent sums and differences on a number line Add or subtract within 1000 using drawings or models Explain addition and subtraction strategies 	<p>MP.1. Make sense of problems and persevere in solving them.</p>

		<p>all sums of two one-digit numbers.</p> <ul style="list-style-type: none"> MA.2a. By the end of Grade 2, know from memory related subtraction facts of sums of two one-digit numbers. 		
January	Measurement and Data	<p>2.MD Measure and estimate lengths in standard units.</p> <ul style="list-style-type: none"> 1. Measure the length of an object by selecting and using appropriate tools such as rulers, yardsticks, meter sticks, and measuring tapes. 2. Measure the length of an object twice, using length units of different lengths for the two measurements; describe how the two measurements relate to the size of the unit chosen. 3. Estimate lengths using units of inches, feet, centimeters, and meters. <p>Represent and interpret data.</p> <ul style="list-style-type: none"> 9. Generate measurement data by measuring lengths of several objects to the nearest whole unit, or by making repeated measurements of the same object. Show the measurements by making a line plot, where the horizontal scale is marked off in whole-number units. 10. Draw a picture graph and a bar graph (with single-unit scale) to represent a data set with up to four categories. Solve simple put-together, take-apart, and compare problems using information presented in a bar graph. 	<ul style="list-style-type: none"> Measure lengths of objects using appropriate tools Measure using different units Estimate length Represent measurements on line plots, picture graphs, and bar graphs 	MP.5. Use appropriate tools strategically.
February/March	Operations and Algebraic Thinking	<p>2.OA Represent and solve problems involving addition and subtraction.</p> <ul style="list-style-type: none"> 1. Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem. (See Table 1.) 	<ul style="list-style-type: none"> Solve one- and two-step word problems involving addition and subtraction situations using drawings and equations with a symbol for the unknown. 	MP.2. Reason abstractly and quantitatively.

	Measurement and Data	<p>2.MD Measure and estimate lengths in standard units.</p> <ul style="list-style-type: none"> 4. Measure to determine how much longer one object is than another, expressing the length difference in terms of a standard length unit. <p>Relate addition and subtraction to length.</p> <ul style="list-style-type: none"> 5. Use addition and subtraction within 100 to solve word problems involving lengths that are given in the same units, e.g., by using drawings (such as drawings of rulers) and equations with a symbol for the unknown number to represent the problem. <p>Work with time and money.</p> <ul style="list-style-type: none"> 8. Solve word problems involving dollar bills, quarters, dimes, nickels, and pennies, using \$ and ¢ symbols appropriately. <i>Example: If you have 2 dimes and 3 pennies, how many cents do you have?</i> 	<ul style="list-style-type: none"> Measure and compare measurements Use addition and subtraction to solve word problems involving length Word problems involving money 	
April	<p>Geometry</p> <p>Measurement and Data</p>	<p>2.G Reason with shapes and their attributes.</p> <ul style="list-style-type: none"> 3. Partition circles and rectangles into two, three, or four equal shares, describe the shares using the words <i>halves, thirds, half of, a third of, etc.</i>, and describe the whole as two halves, three thirds, four fourths. Recognize that equal shares of identical wholes need not have the same shape. <p>2.MD Work with time and money.</p> <ul style="list-style-type: none"> 7. Tell and write time from analog and digital clocks to the nearest five minutes, using a.m. and p.m. MA.7a. Know the relationships of time, including seconds in a minute, minutes in an hour, hours in a day, days in a week, a month, and a year; and weeks in a month and a year. 	<ul style="list-style-type: none"> Halves, thirds, and fourths of the whole Tell and write time to the nearest five minutes Relationship between units of time (seconds, minutes, hours, days, weeks, months, years) 	MP.6. Attend to precision.
May	Geometry	<p>2. G. Reason with shapes and their attributes.</p> <ul style="list-style-type: none"> 1. Recognize and draw shapes having specified attributes, such as a given number of angles or a given number of equal faces. Identify triangles, 	<ul style="list-style-type: none"> Recognize shapes have certain attributes 	MP.7. Look for and make sense of structure.

		quadrilaterals, pentagons, hexagons, and cubes.		
June	Geometry Operations and Algebraic Thinking	<p>2.G Reason with shapes and their attributes.</p> <ul style="list-style-type: none"> 2. Partition a rectangle into rows and columns of same-size squares and count to find the total number of them. <p>2.OA Work with equal groups of objects to gain foundations for multiplication.</p> <ul style="list-style-type: none"> 3. Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express the total as a sum of equal addends. 4. Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends. 	<ul style="list-style-type: none"> Partition a rectangle into rows and columns Odd and even numbers Using addition to find total number of objects in arrays 	MP.4. Model with mathematics.

March	Statistics and Probability	<p>7.SP Investigate chance processes and develop, use, and evaluate probability models.</p> <ul style="list-style-type: none"> • 5. Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around $\frac{1}{2}$ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event. • 6. Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability. <i>For example, when rolling a number cube 600 times, predict that a 3 or 6 would be rolled roughly 200 times, but probably not exactly 200 times.</i> • 7. Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. <ul style="list-style-type: none"> a. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events. <i>For example, if a student is selected at random from a class, find the probability that Jane will be selected and the probability that a girl will be selected.</i> 	<ul style="list-style-type: none"> • Probability of a chance event • Collect data and predict relative frequency • Given a simple event, develop a probability model to predict or find the likelihood of an event 	<p>MP.3. Construct viable arguments and critique the reasoning of others</p> <p>MP.4. Model with mathematics</p>

	Ratios and Proportional Relationships	<p>b. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process. For example, find the approximate probability that a spinning penny will land heads up or that a tossed paper cup will land open-end down. Do the outcomes for the spinning penny appear to be equally likely based on the observed frequencies?</p> <p>7.RP Analyze proportional relationships and use them to solve real-world and mathematical problems.</p> <ul style="list-style-type: none"> 3. Use proportional relationships to solve multi-step ratio and percent problems. <i>Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.</i> 	<ul style="list-style-type: none"> Application of percents with probability 	
April	Statistics and Probability	<p>7.SP Investigate chance processes and develop, use, and evaluate probability models.</p> <ul style="list-style-type: none"> 8. Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. <ul style="list-style-type: none"> a. Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs. b. Represent sample spaces for compound events using methods such as organized lists, tables, and tree diagrams. For an event described in everyday language (e.g., “rolling double sixes”), identify the outcomes in the sample space which compose the event. c. Design and use a simulation to generate frequencies for compound events. <i>For</i> 	<ul style="list-style-type: none"> Given a simple event, use organized lists, tables, tree diagrams and simulation to find the probability 	<p>MP.4. Model with mathematics</p> <p>MP.5. Use appropriate tools strategically</p> <p>MP.6. Attend to Precision</p>

	Ratios and Proportional Relationships	<p><i>example, use random digits as a simulation tool to approximate the answer to the question: If 40% of donors have type A blood, what is the probability that it will take at least 4 donors to find one with type A blood?</i></p> <p>7.RP Analyze proportional relationships and use them to solve real-world and mathematical problems.</p> <ul style="list-style-type: none"> 3. Use proportional relationships to solve multi-step ratio and percent problems. <i>Examples: simple interest, tax, markups and markdowns, gratuities and commissions, fees, percent increase and decrease, percent error.</i> 	<ul style="list-style-type: none"> Application of percents with probability 	
May – June	Statistics and Probability	<p>7.SP Use random sampling to draw inferences about a population.</p> <ul style="list-style-type: none"> 1. Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences. 2. Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions. <i>For example, estimate the mean word length in a book by randomly sampling words from the book; predict the winner of a school election based on randomly sampled survey data. Gauge how far off the estimate or prediction might be.</i> <p>Draw informal comparative inferences about two populations.</p> <ul style="list-style-type: none"> 3. Informally assess the degree of visual 	<ul style="list-style-type: none"> Generate a sample that best represents a population Develop a probability model to predict or find the likelihood of simple and compound events Use organized lists, tables, 	<p>MP.3. Construct viable arguments and critique the reasoning of others</p> <p>MP.4. Model with mathematics</p> <p>MP.6. Attend to precision</p>

		<p>overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability. <i>For example, the mean height of players on the basketball team is 10 cm greater than the mean height of players on the soccer team, about twice the variability (mean absolute deviation) on either team; on a dot plot, the separation between the two distributions of heights is noticeable.</i></p> <ul style="list-style-type: none"> 4. Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations. <i>For example, decide whether the words in a chapter of a seventh-grade science book are generally longer than the words in a chapter of a fourth-grade science book.</i> 	<p>tree diagrams and simulation to find the probability of simple and compound events</p> <ul style="list-style-type: none"> Find measures of center and variability to interpret and compare data sets and/or populations

Grade 8 Mathematics Curriculum Map

Timeline/Teacher notes on progress	Topic	Standards	Content/Skills	Standards for Mathematical Practice
September – October	The Number System	<p>8.NS Know that there are numbers that are not rational, and approximate them by rational numbers.</p> <ul style="list-style-type: none"> 1. Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert a decimal expansion which repeats eventually into a rational 	<ul style="list-style-type: none"> Classify a number as rational or irrational 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.4. Model with mathematics.</p> <p>MP.8. Look for and</p>

	<p>Expressions and Equations</p>	<p>number.</p> <ul style="list-style-type: none"> 2. Use rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions (e.g., π^2). <i>For example, by truncating the decimal expansion of $\sqrt{2}$ show that $\sqrt{2}$ is between 1 and 2, then between 1.4 and 1.5, and explain how to continue on to get better approximations.</i> <p>8.EE Work with radicals and integer exponents.</p> <ul style="list-style-type: none"> 1. Know and apply the properties of integer exponents to generate equivalent numerical expressions. <i>For example, $3^2 \times 3^{-5} = 3^{-3} = 1/3^3 = 1/27$.</i> 2. Use square root and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$, where p is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect cubes. Know that $\sqrt{2}$ is irrational. 3. Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is than the other. <i>For example, estimate the population of the United States as 3×10^8 and the population of the world as 7×10^9, and determine that the world population is more than 20 times larger.</i> 4. Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Use scientific notation and choose units of appropriate size for measurements of very large or very small quantities (e.g., use millimeters per year for seafloor spreading). Interpret scientific notation that has been generated by technology. 	<ul style="list-style-type: none"> Identify the location of an irrational number on the number line Find equivalent expressions when using the properties of integer exponents Square root and cube root as representations for equation solutions Represent small and large quantities in scientific notation Perform operations with numbers expressed in scientific notation (decimal and scientific notation) 	<p>express regularity in repeated reasoning.</p>
--	----------------------------------	---	--	--

	Statistics and Probability	<p>situation it models, and in terms of its graph or a table of values.</p> <p>8.SP Investigate patterns of association in bivariate data.</p> <ul style="list-style-type: none"> • 1. Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association. • 2. Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line. • 3. Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. <i>For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.</i> 	<ul style="list-style-type: none"> • Construct a scatterplot • Determine patterns: clustering, outliers, positive or negative association, linear and non-linear association in a scatterplot • Draw line of best fit • Determine the equation of line of best fit • Use line of best fit equation to solve problems 	
January – February	Expressions and Equations	<p>8.EE Analyze and solve linear equations and pairs of simultaneous linear equations.</p> <ul style="list-style-type: none"> • 7. Solve linear equations in one variable. <ul style="list-style-type: none"> a. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which of these possibilities is the case by successively transforming the given equation into simpler forms, until an equivalent equation of the form $x = a$, $a = a$, or $a = b$ results (where a and b are different numbers). b. Solve linear equations with rational number coefficients, including equations whose 	<ul style="list-style-type: none"> • Identifying linear equations • Solving linear equations 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.6. Attend to precision.</p> <p>MP.7 Look for and make use of structure.</p>

		<p>solutions require expanding expressions using the distributive property and collecting like terms.</p> <ul style="list-style-type: none"> 8. Analyze and solve pairs of simultaneous linear equations. <ul style="list-style-type: none"> a. Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. b. Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations. Solve simple cases by inspection. <i>For example, $3x + 2y = 5$ and $3x + 2y = 6$ have no solution because $3x + 2y$ cannot simultaneously be 5 and 6.</i> c. Solve real-world and mathematical problems leading to two linear equations in two variables. <i>For example, given coordinates for two pairs of points, determine whether the line through the first pair of points intersects the line through the second pair.</i> 	<ul style="list-style-type: none"> Estimating solutions to systems of equations by graphing Solve systems of equations algebraically Determine the number of solutions to a system of equations 	
March	Functions	<p>8.F Define, evaluate, and compare functions.</p> <ul style="list-style-type: none"> 1. Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output. 2. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.</i> 3. Interpret the equation $y = mx + b$ as defining a linear function whose graph is a straight 	<ul style="list-style-type: none"> Determine a function from a graph using the vertical line test Identify a linear function Linear and non-linear functions 	<p>MP.1. 		numbers is rational; that the sum of a rational number and an irrational number is irrational; and that the product of a nonzero rational number and an irrational number is irrational		
October - November	Arithmetic – Arithmetic with Polynomials and Rational Expressions A-APR	Perform arithmetic operations on polynomials. 1. Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials.	<ul style="list-style-type: none"> • Demonstrate understanding of polynomials • Operations 	MP.2. Reason abstractly and quantitatively
	Algebra - Creating equations A-CED	Create equations that describe numbers or relationships. 1. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions. 2. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. 3. Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. <i>For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.</i>	<ul style="list-style-type: none"> • Create equations with one variable • Solve inequalities • Create equations with two or more variables • Graph equations • Represent quantitative relationships 	MP.1. Make sense of problems and persevere in solving them MP.2. Reason abstractly and quantitatively MP.4. Model with mathematics MP.6. Attend to Precision MP.7. Look for and make use of structure
December	Algebra – Reasoning with Equations and Inequalities A-REI	Write expressions in equivalent forms to solve problems. 3. Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression. a. Factor a quadratic expression to reveal the	<ul style="list-style-type: none"> • Explain steps in solving equations • Solve equations • Give examples of other solutions 	MP.1. Make sense of problems and persevere in solving them MP.2. Reason

		<p>zeros of the function it defines.</p> <p>b. Complete the square in a quadratic expression to reveal the maximum or minimum value of the function it defines.</p> <p>c. Use the properties of exponents to transform expressions for exponential functions. <i>For example, the expression 1.15^t can be rewritten as $(1.15^{1/12})^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.</i></p>	<ul style="list-style-type: none"> Solve linear equations Solve quadratic equations Derive formulas Factoring Square roots 	abstractly and quantitatively
	Numbers and Quantities – The Complex Number System N-CN	<p>Perform arithmetic operations with complex numbers.</p> <p>1. Know there is a complex number i such that $i^2 = -1$, and every complex number has the form $a + bi$ with a and b real.</p> <p>2. Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.</p> <p>3. (+) Find the conjugate of a complex number; use conjugates to find moduli and quotients of complex numbers.</p>	<ul style="list-style-type: none"> Identify complex numbers Use commutative, associative and distributive properties Perform operations with complex numbers Conjugates 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to precision</p>
January - February	Algebra – Reasoning with Equations and Inequalities A-REI	<p>Understand solving equations as a process of reasoning and explain the reasoning.</p> <p>1. Explain each step in solving a simple equation as following from the equality of numbers asserted at the previous step, starting from the assumption that the original equation has a solution. Construct a viable argument to justify a solution method.</p> <p>Solve equations and inequalities in one variable.</p> <p>3. Solve linear equations and inequalities in one variable, including equations with coefficients represented by letters. MA.3.a. Solve linear equations and inequalities in one variable involving absolute value.</p> <p>4. Solve quadratic equations in one variable.</p>	<ul style="list-style-type: none"> Explain steps of solving equations Solve systems of equations Solve linear equations with one variable Solve and derive quadratic equations Solve graphically and algebraically Solve systems of equations with two variables Approximate solutions 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.3. Construct viable arguments and critique the reasoning of others</p> <p>MP.4. Model with mathematics</p>

		<p>a. Use the method of completing the square to transform any quadratic equation in x into an equation of the form $(x - p)^2 = q$ that has the same solutions. Derive the quadratic formula from this form.</p> <p>b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$), taking square roots, completing the square, the quadratic formula, and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a \pm bi$ for real numbers a and b.</p> <p>Solve systems of equations.</p> <p>5. Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.</p> <p>6. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.</p> <p>7. Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. <i>For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$.</i></p>		<p>MP.5. Use appropriate tools strategically</p> <p>MP.7. Look for and make use of structure</p>
March	Algebra – Arithmetic with Polynomials and Rational Expressions A-APR	<p>Understand the relationship between zeros and factors of polynomials.</p> <p>2. Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number a, the remainder on division by $x - a$ is $p(a)$, so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$.</p> <p>3. Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.</p>	<ul style="list-style-type: none"> Apply the Remainder Theorem Graph functions defined by polynomials 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to</p>

				Precision
	Algebra – Reasoning with Equations and Inequalities A-REI	<p>Represent and solve equations and inequalities graphically.</p> <p>10. Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).</p> <p>11. Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. ★</p> <p>12. Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.</p>	<ul style="list-style-type: none"> Graph equations and solutions Make tables Explain solutions Use technology 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision.</p>
April	Functions – Interpreting Functions F-IF	<p>Understand the concept of a function and use function notation.</p> <p>1. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.</p> <p>2. Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.</p> <p>3. Recognize that sequences are functions,</p>	<ul style="list-style-type: none"> Define functions Use function notation Evaluate and interpret functions Identify sequences as functions Interpret graphs Demonstrate key features of function relationships Relate domains of functions to quantitative relationships Calculate and interpret function rate of change 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p>

		<p>sometimes defined recursively, whose domain is a subset of the integers. <i>For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1, f(n + 1) = f(n) + f(n - 1)$ for $n \geq 1$.</i></p> <p>Interpret functions that arise in applications in terms of the context.</p> <p>4. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</i></p> <p>5. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. <i>For example, if the function $h(n)$ gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.</i> ★</p> <p>6. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph. ★</p>		MP.6.Attend to precision.
May	Functions – Interpreting Functions F-IF	<p>Analyze functions using different representations.</p> <p>7. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases.</p> <p>a. Graph linear and quadratic functions and show intercepts, maxima, and minima. ★</p> <p>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions. ★</p> <p>e. Graph exponential and logarithmic</p>	<ul style="list-style-type: none"> • Graph linear, and quadratic functions, • Graph square/cube roots functions • Graph exponential and logarithmic functions • Graph trigonometric functions • Write functions defined by expressions • Explain properties of 	<p>MP.1.Make sense of problems and persevere in solving them.</p> <p>MP.2.Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5.Use appropriate tools strategically.</p>

		<p>functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. ★</p> <p>8. Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function.</p> <p>a. Use the process of factoring and completing the square in a quadratic function to show zeros, extreme values, and symmetry of the graph, and interpret these in terms of a context.</p> <p>b. Use the properties of exponents to interpret expressions for exponential functions. For example, identify percent rate of change in functions such as $y = (1.02)^t$, $y = (0.97)^t$,</p> <p>9. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.</p>	<p>functions</p> <ul style="list-style-type: none"> • Factoring • Square • Interpret results • Represent comparisons in a variety of methods 	<p>MP.6.Attend to precision.</p>
	<p>Functions – Interpreting Functions F-BF</p>	<p>Build a function that models a relationship between two quantities.</p> <p>1. Write a function that describes a relationship between two quantities. ★</p> <p>a. Determine an explicit expression, a recursive process, or steps for calculation from a context. ★</p> <p>b. Combine standard function types using arithmetic operations. For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model. ★</p> <p>2. Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate</p>	<ul style="list-style-type: none"> • Write functions • Determine expressions, processes or steps for calculation • Combine function types • Use operations • Write sequences • Model situations • Translate • Identify, on a graph, the effects of replacing value • Find values • Experiment with different cases • Use technology to illustrate 	<p>MP.1.Make sense of problems and persevere in solving them.</p> <p>MP.2.Reason abstractly and quantitatively.</p> <p>MP.4. 		<p>between the two forms. ★</p> <p>Build new functions from existing functions.</p> <p>3. Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $kf(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. <i>Include recognizing even and odd functions from their graphs and algebraic expressions for them.</i></p> <p>4. Find inverse functions.</p> <p>a. Solve an equation of the form $f(x) = c$ for a simple function f that has an inverse and write an expression for the inverse. For example, $f(x) = 2x^3$ or $f(x) = (x + 1)/(x - 1)$ for $x \neq 1$</p>	<p>explanations</p> <ul style="list-style-type: none"> • Inverse functions • Solve equations • Write expressions 	<p>structure.</p> <p>MP.8.Look for an express regularity in repeated reasoning.</p>
June	<p>Statistics and Probability – Interpreting Categorical and Quantitative Data S-ID</p>	<p>Summarize, represent, and interpret data on a single count or measurement variable.</p> <p>1. Represent data with plots on the real number line (dot plots, histograms, and box plots). ★</p> <p>2. Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets. ★</p> <p>3. Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers). ★</p> <p>4. Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. ★</p> <p>Summarize, represent, and interpret data on two categorical and quantitative variables.</p>	<ul style="list-style-type: none"> • Represent data • Use statistics to approximate • Compare center and spread • Use mean and standard deviation of data • Estimate percentages • Use tools/technology • Summarize data • Interpret data • Recognize associations/trends • Fit functions to data • Solve problems in context of data • Emphasize models • Assess fit of functions • Analyze residuals • Scatter plots • Interpret slope and intercept • Correlation vs. causation 	<p>MP.1.Make sense of problems and persevere in solving them.</p> <p>MP.2.Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5.Use appropriate tools strategically.</p> <p>MP.6.Attend to precision</p> <p>MP.7.Look for and make use of structure.</p> <p>MP.8.Look for an express regularity in repeated reasoning.</p>

		<p>5. Summarize categorical data for two categories in two-way frequency tables. Interpret relative frequencies in the context of the data (including joint, marginal, and conditional relative frequencies). Recognize possible associations and trends in the data. ★</p> <p>6. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related. ★</p> <p>a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. <i>Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.</i> ★</p> <p>b. Informally assess the fit of a function by plotting and analyzing residuals. ★</p> <p>c. Fit a linear function for a scatter plot that suggests a linear association. ★</p> <p>Interpret linear models.</p> <p>7. Interpret the slope (rate of change) and the intercept (constant term) of a linear model in the context of the data. ★</p> <p>8. Compute (using technology) and interpret the correlation coefficient of a linear fit. ★</p> <p>9. Distinguish between correlation and causation. ★</p>

Look for an express regularity in repeated reasoning.</p>
May – June	Geometry – Geometric Measurement and Dimension G-GMD	<p>Explain volume formulas and use them to solve problems.</p> <p>1. Give an informal argument for the formulas for the circumference of a circle, area of a circle, volume of a cylinder, pyramid, and cone. <i>Use dissection arguments, Cavalieri’s principle, and informal limit arguments.</i></p> <p>2. (+) Give an informal argument using Cavalieri’s principle for the formulas for the volume of a sphere and other solid figures.</p> <p>3. Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems. ★</p> <p>Visualize relationships between two-dimensional and three-dimensional objects.</p> <p>4. Identify the shapes of two-dimensional</p>	<ul style="list-style-type: none"> Give arguments for formulas Apply Volume formulas Cavalieri’s principle Volume of sphere/other solids Identify 2-D/3-D shapes/cross sections/rotations 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.3. Construct viable arguments and critique the reasoning of others.</p> <p>MP.6. Attend to precision.</p>

		cross-sections of three-dimensional objects, and identify three-dimensional objects generated by rotations of two-dimensional objects		<p>MP.7.Look for and make use of structure.</p> <p>MP.8.Look for an express regularity in repeated reasoning</p>
	Geometry – Modeling with Geometry G-MG	<p>Apply geometric concepts in modeling situations.</p> <ol style="list-style-type: none"> 1. Use geometric shapes, their measures, and their properties to describe objects (e.g., modeling a tree trunk or a human torso as a cylinder). ★ 2. Apply concepts of density based on area and volume in modeling situations (e.g., persons per square mile, BTUs per cubic foot). ★ 3. Apply geometric methods to solve design problems (e.g., designing an object or structure to satisfy physical constraints or minimize cost; working with typographic grid systems based on ratios). ★ 	<ul style="list-style-type: none"> • Use geometry to describe objects • Apply concept of density • Solve design problems 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.4. Model with mathematics.</p> <p>MP.6.Attend to precision.</p> <p>MP.7.Look for and make use of structure.</p>

Grade 11 Mathematics Curriculum Map-Algebra II

Timeline/Teacher notes on progress	Topic	Standards	Content/Skills	Standards for Mathematical Practice
September – October	Numbers and Quantities - The Complex Number System N-CN	<p>Perform arithmetic operations with complex numbers.</p> <ol style="list-style-type: none"> 1. Know there is a complex number i such that $i^2 = -1$, and every complex number has the form $a + bi$ with a and b real. 2. Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers. <p>Use complex numbers in polynomial identities and equations.</p> <ol style="list-style-type: none"> 7. Solve quadratic equations with real coefficients that have complex solutions. 8. (+) Extend polynomial identities to the complex numbers. <i>For example, rewrite $x^2 + 4$ as $(x + 2i)(x - 2i)$.</i> 9. (+) Know the Fundamental Theorem of Algebra; show that it is true for quadratic polynomials. 	<ul style="list-style-type: none"> • Identify complex numbers • Use commutative, associative and distributive properties • Perform operations with complex numbers • Solve quadratic equations • Apply polynomial identities to complex numbers • Fundamental Theorem of Algebra 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to precision</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>
	Algebra – Seeing Structure in Expressions A-SSE	<p>Interpret the structure of expressions.</p> <ol style="list-style-type: none"> 1. Interpret expressions that represent a quantity in terms of its context. <ol style="list-style-type: none"> a. Interpret parts of an expression, such as terms, factors, and coefficients. b. Interpret complicated expressions by viewing one or more of their parts as a single entity. <i>For example, interpret $P(1 + r)^n$ as the product of P and a factor not depending on P.</i> 2. Use the structure of an expression to identify ways to rewrite it. <i>For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$, thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$.</i> 	<ul style="list-style-type: none"> • Interpret expressions • Rewrite expressions • Explain steps in solving equations • Derive formulas to solve problems 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure</p>

		<p>Write expressions in equivalent forms to solve problems.</p> <p>4. Derive the formula for the sum of a finite geometric series (when the common ratio is not 1), and use the formula to solve problems. <i>For example, calculate mortgage payments.</i> ★</p>		
October - November	Algebra – Seeing Structure in Expressions A-APR	<p>Perform arithmetic operations on polynomials.</p> <p>1. Understand that polynomials form a system analogous to the integers, namely, they are closed under the operations of addition, subtraction, and multiplication; add, subtract, and multiply polynomials. MA.1.a. Divide polynomials.</p> <p>Understand the relationship between zeros and factors of polynomials.</p> <p>2. Know and apply the Remainder Theorem: For a polynomial $p(x)$ and a number a, the remainder on division by $x - a$ is $p(a)$, so $p(a) = 0$ if and only if $(x - a)$ is a factor of $p(x)$.</p> <p>3. Identify zeros of polynomials when suitable factorizations are available, and use the zeros to construct a rough graph of the function defined by the polynomial.</p> <p>Use polynomial identities to solve problems.</p> <p>4. Prove polynomial identities and use them to describe numerical relationships. <i>For example, the polynomial identity $(x^2 + y^2)^2 = (x^2 - y^2)^2 + (2xy)^2$ can be used to generate Pythagorean triples.</i></p> <p>5. (+) Know and apply the Binomial Theorem for the expansion of $(x + y)^n$ in powers of x and y for a positive integer n, where x and y are any numbers, with coefficients determined for example by Pascal's Triangle.</p> <p>Rewrite rational expressions.</p> <p>6. Rewrite simple rational expressions in different forms; write $\frac{a(x)}{b(x)}$ in the form $q(x) + \frac{r(x)}{b(x)}$, where $a(x)$, $b(x)$, $q(x)$, and $r(x)$</p>	<ul style="list-style-type: none"> • Demonstrate understanding of polynomials • Operations • Apply the Remainder Theorem • Graph functions defined by polynomials • Prove polynomial identities • Describe numerical relationships • Apply the Binomial Theorem • Rewrite rational expressions • Properties of rational expressions 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to Precision</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>

		<p>are polynomials with the degree of $r(x)$ less than the degree of $b(x)$, using inspection, long division, or, for the more complicated examples, a computer algebra system.</p> <p>7. (+) Understand that rational expressions form a system analogous to the rational numbers, closed under addition, subtraction, multiplication, and division by a nonzero rational expression; add, subtract, multiply, and divide rational expressions.</p>		
December	Algebra – Creating Equations A-CED	<p>Create equations that describe numbers or relationships.</p> <p>1. Create equations and inequalities in one variable and use them to solve problems. Include equations arising from linear and quadratic functions, and simple rational and exponential functions.</p> <p>2. Create equations in two or more variables to represent relationships between quantities; graph equations on coordinate axes with labels and scales. ★</p> <p>3. Represent constraints by equations or inequalities, and by systems of equations and/or inequalities, and interpret solutions as viable or non-viable options in a modeling context. <i>For example, represent inequalities describing nutritional and cost constraints on combinations of different foods.</i> ★</p> <p>4. Rearrange formulas to highlight a quantity of interest, using the same reasoning as in solving equations. <i>For example, rearrange Ohm’s law $V = IR$ to highlight resistance R.</i> ★</p>	<ul style="list-style-type: none"> • Create equations with one variable • Solve inequalities • Create equations with two or more variables • Graph equations • Represent quantitative relationships • Constraints of equations/inequalities/systems of equations • Interpret solutions • Rearrange formulas to highlight quantities of interest 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.4. Model with mathematics</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure</p>
	Algebra – Linear, Quadratic, and Exponential Models F-LE	<p>Construct and compare linear, quadratic, and exponential models and solve problems.</p> <p>4. For exponential models, express as a logarithm the solution to $ab^{ct} = d$ where a, c, and d are numbers and the base b is 2, 10, or e; evaluate the logarithm using technology. ★</p>	<ul style="list-style-type: none"> • Express logarithms • Use technology to evaluate results 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason</p>

				<p>abstractly and quantitatively</p> <p>MP.4. Model with mathematics</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure</p>
January-February	<p>Functions – Interpreting Functions</p> <p>F-IF</p>	<p>Interpret functions that arise in applications in terms of the context.</p> <p>4. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</i></p> <p>5. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. <i>For example, if the function $h(n)$ gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.</i> ★</p> <p>6. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph. ★</p>	<ul style="list-style-type: none"> • Use function notation • Evaluate and interpret functions • Identify sequences as functions • Interpret graphs • Demonstrate key features of function relationships • Relate domains of functions to quantitative relationships • Calculate and interpret function rate of change • Graph linear, and quadratic functions, • Graph square/cube roots functions • Graph exponential and logarithmic functions • Graph trigonometric functions • Write functions defined by 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision.</p>

		<p>Analyze functions using different representations.</p> <p>7. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. ★</p> <p>b. Graph square root, cube root, and piecewise-defined functions, including step functions and absolute value functions. ★</p> <p>c. Graph polynomial functions, identifying zeros when suitable factorizations are available, and showing end behavior. ★</p> <p>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. ★</p> <p>8. Write a function defined by an expression in different but equivalent forms to reveal and explain different properties of the function. MA.8.c. Translate among different representations of functions and relations: graphs, equations, point sets, and tables.</p> <p>9. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.</i></p>	<p>expressions</p> <ul style="list-style-type: none"> • Explain properties of functions • Factoring • Square • Interpret results • Represent comparisons in a variety of methods 	
March	Numbers and Quantities - Vector and Matrix Quantities N-VM	<p>Represent and model with vector quantities.</p> <p>1. (+) Recognize vector quantities as having both magnitude and direction. Represent vector quantities by directed line segments, and use appropriate symbols for vectors and their magnitudes (e.g., \mathbf{v}, \mathbf{v}, \mathbf{v}, v).</p> <p>3. (+) Solve problems involving velocity and other quantities that can be represented by vectors.</p> <p>Perform operations on matrices and use matrices in</p>	<ul style="list-style-type: none"> • Vector quantities: magnitude and direction • Line segment representation • Use appropriate symbols • Solve problems (velocity and other quantities) • Use matrices to present/manipulate data • Apply operations to matrices 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p>

		<p>applications.</p> <p>6. (+) Use matrices to represent and manipulate data, e.g., to represent payoffs or incidence relationships in a network.</p> <p>8. (+) Add, subtract, and multiply matrices of appropriate dimensions.</p> <p>12. (+) Work with 2×2 matrices as transformations of the plane, and interpret the absolute value of the determinant in terms of area</p>	<ul style="list-style-type: none"> Transformation of plane Interpret Absolute value (area) 	<p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p>
	Algebra – Reasoning with Equations and Inequalities A-REI	<p>Understand solving equations as a process of reasoning and explain the reasoning.</p> <p>2. Solve simple rational and radical equations in one variable, and give examples showing how extraneous solutions may arise.</p> <p>Represent and solve equations and inequalities graphically.</p> <p>11. Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions. ★</p>	<ul style="list-style-type: none"> Solve radical/rational expressions Give examples Present other solutions Graph equations and solutions Make tables Explain solutions Use technology 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.3. Construct viable arguments and critique the reasoning of others.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision.</p>
April	Functions – Building functions F-BF	<p>Build a function that models a relationship between two quantities.</p> <p>1. Write a function that describes a relationship between two quantities. ★</p> <p>b. Combine standard function types using arithmetic operations. <i>For example, build a function that models the temperature of a cooling body by adding a constant function</i></p>	<ul style="list-style-type: none"> Write functions Determine expressions, processes or steps for calculation Combine function types Use operations Write sequences Model situations 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p>

		<p><i>to a decaying exponential, and relate these functions to the model. ★</i></p> <p>Build new functions from existing functions.</p> <p>3. Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $kf(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. <i>Include recognizing even and odd functions from their graphs and algebraic expressions for them.</i></p> <p>4. Find inverse functions.</p> <p>a. Solve an equation of the form $f(x) = c$ for a simple function f that has an inverse and write an expression for the inverse. <i>For example, $f(x) = 2x^3$ or $f(x) = (x + 1)/(x - 1)$ for $x \neq 1$.</i></p>	<ul style="list-style-type: none"> • Translate • Identify, on a graph, the effects of replacing value • Find values • Experiment with different cases • Use technology to illustrate explanations • Inverse functions • Solve equations • Write expressions 	<p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>
May	<p>Functions – Trigonometric Functions F-TF</p>	<p>Extend the domain of trigonometric functions using the unit circle.</p> <p>1. Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.</p> <p>2. Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.</p> <p>Model periodic phenomena with trigonometric functions.</p> <p>5. Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline.</p> <p>Prove and apply trigonometric identities.</p> <p>8. Prove the Pythagorean identity $\sin^2(\theta) + \cos^2(\theta) = 1$ and use it to find $\sin(\theta)$, $\cos(\theta)$, or \tan</p>	<ul style="list-style-type: none"> • Radian measures/arcs • Unit circles • Coordinate planes • Apply trigonometric functions • Prove/apply Pythagorean identities of trigonometric functions 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>

		(θ) given $\sin(\theta)$, $\cos(\theta)$, or $\tan(\theta)$ and the quadrant.		
June	Statistics and Probability - Interpreting Categorical and Quantitative Data S-ID	<p>Summarize, represent, and interpret data on a single count or measurement variable.</p> <p>4. Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve. ★</p>	<ul style="list-style-type: none"> • Use technology • Use mean and standard deviation of data • Estimate percentages 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>
	Statistics and Probability - Making Inferences and Justifying Conclusions S-IC	<p>Understand and evaluate random processes underlying statistical experiments.</p> <p>1. Understand statistics as a process for making inferences to be made about population parameters based on a random sample from that population. ★</p> <p>2. Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. <i>For example, a model says a spinning coin falls heads up with</i></p>	<ul style="list-style-type: none"> • Apply statistics to real life examples • Evaluate data/results • Explain purpose/differences of statistical tools/process • Estimate mean/proportion • Margin of error • Data comparison of random experiments 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.3. Construct</p>

		<p><i>probability 0.5. Would a result of 5 tails in a row cause you to question the model? ★</i></p> <p>Make inferences and justify conclusions from sample surveys, experiments, and observational studies.</p> <p>3. Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each. ★</p> <p>4. Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling. ★</p> <p>5. Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant. ★</p> <p>6. Evaluate reports based on data. ★</p>		<p>viable arguments and critique the reasoning of others</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>
	<p>Statistics and Probability - Using Probability to Make Decisions S-MD</p>	<p>Use probability to evaluate outcomes of decisions.</p> <p>6. (+) Use probabilities to make fair decisions (e.g., drawing by lots, using a random number generator). *</p> <p>7. (+) Analyze decisions and strategies using probability concepts (e.g., product testing, medical testing, pulling a hockey goalie at the end of a game).</p>	<ul style="list-style-type: none"> • Probability • Analyze/Evaluate decisions 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.3. Construct viable arguments and critique the reasoning of others</p> <p>MP.4. Model with mathematics.</p>

				<p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p>

December	Algebra – Reasoning with Equations and Inequalities A-REI	<p>Represent and solve equations and inequalities graphically.</p> <p>10. Understand that the graph of an equation in two variables is the set of all its solutions plotted in the coordinate plane, often forming a curve (which could be a line).</p>	<ul style="list-style-type: none"> • Graph equations and solutions • Make tables • Explain solutions • Use technology 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.4. Model with mathematics.</p>

		<p>11. Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.</p> <p>12. Graph the solutions to a linear inequality in two variables as a half-plane (excluding the boundary in the case of a strict inequality), and graph the solution set to a system of linear inequalities in two variables as the intersection of the corresponding half-planes.</p>		<p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision.</p>
January	Functions – Interpreting Functions F-IF	<p>Understand the concept of a function and use function notation.</p> <p>1. Understand that a function from one set (called the domain) to another set (called the range) assigns to each element of the domain exactly one element of the range. If f is a function and x is an element of its domain, then $f(x)$ denotes the output of f corresponding to the input x. The graph of f is the graph of the equation $y = f(x)$.</p> <p>2. Use function notation, evaluate functions for inputs in their domains, and interpret statements that use function notation in terms of a context.</p> <p>3. Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. <i>For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1, f(n + 1) = f(n) + f(n - 1)$ for $n \geq 1$.</i></p> <p>Interpret functions that arise in applications in terms of the context.</p>	<ul style="list-style-type: none"> • Define functions • Use function notation • Evaluate and interpret functions • Identify sequences as functions • Interpret graphs • Demonstrate key features of function relationships • Relate domains of functions to quantitative relationships • Calculate and interpret function rate of change • Use function notation • Evaluate and interpret functions • Identify sequences as functions • Interpret graphs • Demonstrate key features of function relationships 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision.</p> <p>MP.7. Look for and make use of structure.</p>

		<p>4. For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; intervals where the function is increasing, decreasing, positive, or negative; relative maximums and minimums; symmetries; end behavior; and periodicity.</i> ★</p> <p>5. Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes. <i>For example, if the function $h(n)$ gives the number of person-hours it takes to assemble n engines in a factory, then the positive integers would be an appropriate domain for the function.</i> ★</p> <p>6. Calculate and interpret the average rate of change of a function (presented symbolically or as a table) over a specified interval. Estimate the rate of change from a graph. ★</p>	<ul style="list-style-type: none"> • Relate domains of functions to quantitative relationships • Calculate and interpret function rate of change 	MP.8. Look for an express regularity in repeated reasoning.
February	Functions – Interpreting Functions F-IF	<p>Analyze functions using different representations.</p> <p>7. Graph functions expressed symbolically and show key features of the graph, by hand in simple cases and using technology for more complicated cases. ★</p> <p>a. Graph linear and quadratic functions and show intercepts, maxima, and minima. ★</p> <p>e. Graph exponential and logarithmic functions, showing intercepts and end behavior, and trigonometric functions, showing period, midline, and amplitude. ★</p> <p>9. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). <i>For example, given a graph of one quadratic function and an algebraic expression for another, say which has the larger maximum.</i></p>	<ul style="list-style-type: none"> • Graph linear, and quadratic functions, • Graph square/cube roots functions • Graph exponential and logarithmic functions • Graph trigonometric • Represent comparisons in a variety of methods 	<p>MP.1. Use appropriate tools strategically</p> <p>MP.7. Look for and make use of</p>

				structure MP.8. Look for and express regularity in repeated reasoning
	Functions – Building Functions F-BF	<p>Build a function that models a relationship between two quantities.</p> <ol style="list-style-type: none"> 1. Write a function that describes a relationship between two quantities. <ol style="list-style-type: none"> a. Determine an explicit expression, a recursive process, or steps for calculation from a context. ★ b. Combine standard function types using arithmetic operations. <i>For example, build a function that models the temperature of a cooling body by adding a constant function to a decaying exponential, and relate these functions to the model.</i> ★ 2. Write arithmetic and geometric sequences both recursively and with an explicit formula, use them to model situations, and translate between the two forms. ★ <p>Build new functions from existing functions.</p> <ol style="list-style-type: none"> 3. Identify the effect on the graph of replacing $f(x)$ by $f(x) + k$, $kf(x)$, $f(kx)$, and $f(x + k)$ for specific values of k (both positive and negative); find the value of k given the graphs. Experiment with cases and illustrate an explanation of the effects on the graph using technology. <i>Include recognizing even and odd functions from their graphs and algebraic expressions for them.</i> 	<ul style="list-style-type: none"> • Write functions • Determine expressions, processes or steps for calculation • Combine function types • Use operations • Write sequences • Model situations • Translate • Identify, on a graph, the effects of replacing value • Find values • Experiment with different cases • Use technology to illustrate explanations • Inverse functions • Solve equations • Write expressions 	<p>MP.1. Make sense of problems and persevere in solving them.</p> <p>MP.2. Reason abstractly and quantitatively.</p> <p>MP.4. Model with mathematics.</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to precision</p> <p>MP.7. Look for and make use of structure.</p> <p>MP.8. Look for an express regularity in repeated reasoning.</p>
March	Functions – Linear, Quadratic and Exponential Models F-LE	<p>Construct and compare linear, quadratic, and exponential models and solve problems.</p> <ol style="list-style-type: none"> 1. Distinguish between situations that can be modeled with linear functions and with exponential functions. ★ 	<ul style="list-style-type: none"> • Differentiate between linear and exponential functions • Prove differences in linear/exponential functions • Rate/unit • Percentage rate/uni 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason</p>

		<p>a. Prove that linear functions grow by equal differences over equal intervals, and that exponential functions grow by equal factors over equal intervals. ★</p> <p>b. Recognize situations in which one quantity changes at a constant rate per unit interval relative to another. ★</p> <p>c. Recognize situations in which a quantity grows or decays by a constant percent rate per unit interval relative to another. ★</p> <p>2. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table). ★</p> <p>3. Observe using graphs and tables that a quantity increasing exponentially eventually exceeds a quantity increasing linearly, quadratically, or (more generally) as a polynomial function. ★</p> <p>Interpret expressions for functions in terms of the situation they model.</p> <p>5. Interpret the parameters in a linear or exponential function in terms of a context. ★</p>	<ul style="list-style-type: none"> • Construct linear/exponential functions • Observe/use graphs to differentiate between exponential/linear functions • Interpret functions in context 	<p>abstractly and quantitatively</p> <p>MP.4. Model with mathematics</p> <p>MP.5. Use appropriate tools strategically.</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure</p>
April	Geometry – Congruence G-CO	<p>Experiment with transformations in the plane.</p> <p>1. Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.</p> <p>2. Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal</p>	<ul style="list-style-type: none"> • Define geometric terms • Represent, describe and compare transformations in the plane • Describe rotations/reflections of polygons • Develop definitions of geometric terms • Draw transformed figures 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>M. 4. Model with mathematics.</p> <p>MP.5. Use appropriate tools</p>

		<p>stretch).</p> <p>3. Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.</p> <p>4. Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.</p> <p>5. Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.</p>		<p>strategically.</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure.</p>
	<p>Geometry – Congruence G-CO</p>	<p>Understand congruence in terms of rigid motions.</p> <p>6. Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.</p> <p>7. Use the definition of congruence in terms of rigid motions to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.</p> <p>8. Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.</p>	<ul style="list-style-type: none"> • Apply geometric definitions • Predict effects of rigid motion • Determine congruence • Congruent triangles/angles • Explain criteria for congruence 	<p>MP.1. Make sense of problems and persevere in solving them</p> <p>MP.2. Reason abstractly and quantitatively</p> <p>MP.3. Construct viable arguments and critique the reasoning of others.</p> <p>MP.6. Attend to Precision</p> <p>MP.7. Look for and make use of structure.</p>
May	<p>Geometry – Congruence G-CO</p>	<p>Make geometric constructions.</p> <p>12. Make formal geometric constructions with a variety of tools and methods (compass and</p>	<ul style="list-style-type: none"> • Geometric constructions • Use tools/technology to represent constructions • Construct regular polygons 	<p>MP.1.
